

Computer Setup (F10) Utility Guide

Business PCs

Document Part Number: 361206-003

May 2005

This guide provides instructions on how to use Computer Setup. This tool is used to reconfigure and modify computer default settings when new hardware is installed and for maintenance purposes.

Computer Setup (F10) Utility

Computer Setup (F10) Utilities

Use Computer Setup (F10) Utility to do the following:

- Change factory default settings.
- Set the system date and time.
- Set, view, change, or verify the system configuration, including settings for processor, graphics, memory, audio, storage, communications, and input devices.
- Modify the boot order of bootable devices such as hard drives, diskette drives, optical drives, or USB flash media devices.
- Enable Quick Boot, which is faster than Full Boot but does not run all of the diagnostic tests run during a Full Boot. You can set the system to:
 - ☐ always Quick Boot (default);
 - ☐ periodically Full Boot (from every 1 to 30 days); or
 - ☐ always Full Boot.
- Select Post Messages Enabled or Disabled to change the display status of Power-On Self-Test (POST) messages. Post Messages Disabled suppresses most POST messages, such as memory count, product name, and other non-error text messages. If a POST error occurs, the error is displayed regardless of the mode selected. To manually switch to Post Messages Enabled during POST, press any key (except **F1** through **F12**).
- Establish an Ownership Tag, the text of which is displayed each time the system is turned on or restarted.
- Enter the Asset Tag or property identification number assigned by the company to this computer.

- Enable the power-on password prompt during system restarts (warm boots) as well as during power-on.
- Establish a setup password that controls access to Computer Setup (F10) Utility and the settings described in this section.
- Secure integrated I/O functionality, including the serial, USB, or parallel ports, audio, or embedded NIC, so that they cannot be used until they are unsecured.
- Enable or disable Master Boot Record (MBR) Security (some models).
- Enable or disable removable media boot ability.
- Enable or disable legacy diskette write ability (when supported by hardware).
- Solve system configuration errors detected but not automatically fixed during the Power-On Self-Test (POST).
- Replicate the system setup by saving system configuration information on diskette and restoring it on one or more computers.
- Execute self-tests on a specified ATA hard drive (when supported by drive).
- Enable or disable DriveLock security (when supported by drive).

Using Computer Setup (F10) Utilities

Computer Setup can be accessed only by turning the computer on or restarting the system. To access the Computer Setup Utilities menu, complete the following steps:

1. Turn on or restart the computer. If you are in Microsoft Windows, click **Start > Shut Down > Restart**.
2. As soon as the computer is turned on, press **F10** when the monitor light turns green to enter Computer Setup. Press **Enter** to bypass the title screen, if necessary.

If you do not press **F10** at the appropriate time, you must restart the computer and again press **F10** when the monitor light turns green to access the utility.

3. Select your language from the list and press **Enter**.
4. A choice of five headings appears in the Computer Setup Utilities menu: File, Storage, Security, Power and Advanced.
5. Use the arrow (left and right) keys to select the appropriate heading. Use the arrow (up and down) keys to select the option you want, then press **Enter**. To return to the Computer Setup Utilities menu, press **Esc**.
6. To apply and save changes, select **File > Save Changes and Exit**.
 - ☐ If you have made changes that you do not want applied, select **Ignore Changes and Exit**.
 - ☐ To reset to factory settings or previously saved default settings (some models), select **Set Defaults and Exit**. This option will restore the original factory system defaults.

CAUTION: Do NOT turn the computer power OFF while the BIOS is saving the Computer Setup (F10) changes because the CMOS could become corrupted. It is safe to turn off the computer only after exiting the F10 Setup screen.

Computer Setup

Heading	Option	Description
File	System Information	<p>Lists:</p> <ul style="list-style-type: none"> • Product name • SKU number (some models) • Processor type/speed/stepping • Cache size (L1/L2) (dual core processors have this listed twice) • Installed memory size/speed, number of channels (single or dual) (if applicable) • Integrated MAC address for embedded, enabled NIC (if applicable) • System BIOS (includes family name and version) • Chassis serial number • Asset tracking number
	About	Displays copyright notice.
	Set Time and Date	Allows you to set system time and date.
	Flash System ROM (some models)	Allows you to select a drive containing a new BIOS.
	Replicated Setup	<p>Save to Removable Media</p> <p>Saves system configuration, including CMOS, to a formatted 1.44-MB diskette, a USB flash media device, or a diskette-like device (a storage device set to emulate a diskette drive).</p> <p>Restore from Removable Media</p> <p>Restores system configuration from a diskette, a USB flash media device, or a diskette-like device.</p>

Support for specific Computer Setup options may vary depending on the hardware configuration.

Computer Setup (Continued)

Heading	Option	Description
File (continued)	Default Setup	<p>Save Current Settings as Default Saves the current system configuration settings as the default.</p> <p>Restore Factory Settings as Default Restores the factory system configuration settings as the default.</p>
	Apply Defaults and Exit	Applies the currently selected default settings and clears any established passwords.
	Ignore Changes and Exit	Exits Computer Setup without applying or saving any changes.
	Save Changes and Exit	Saves changes to system configuration or default settings and exits Computer Setup.
Storage	Device Configuration	<p>Lists all installed BIOS-controlled storage devices.</p> <p>When a device is selected, detailed information and options are displayed. The following options may be presented.</p> <p>Diskette Type Identifies the highest capacity media type accepted by the diskette drive. Legacy Diskette Drives Options are 3.5" 1.44 MB and 5.25" 1.2 MB.</p> <p>Drive Emulation Allows you to select a drive emulation type for a certain storage device. (For example, a Zip drive can be made bootable by selecting diskette emulation.)</p>

Support for specific Computer Setup options may vary depending on the hardware configuration.

Computer Setup *(Continued)*

Heading	Option	Description	
Storage (continued)	Device Configuration (continued)	Drive Type	Emulation Options
		ATAPI Zip drive	None (treated as Other). Diskette (treated as diskette drive).
		ATA Hard Disk	None (treated as Other) Disk (treated as hard drive)
		Legacy Diskette	No emulation options available.
		CD-ROM	No emulation options available.
		ATAPI LS-120	None (treated as Other). Diskette (treated as diskette drive).
		Multisector Transfers (ATA disks only) Specifies how many sectors are transferred per multi-sector PIO operation. Options (subject to device capabilities) are Disabled, 8, and 16.	
Transfer Mode (IDE devices only) Specifies the active data transfer mode. Options (subject to device capabilities) are PIO 0, Max PIO, Enhanced DMA, Ultra DMA 0, and Max UDMA.			

Support for specific Computer Setup options may vary depending on the hardware configuration.

Computer Setup (Continued)

Heading	Option	Description
Storage (continued)	Device Configuration (continued)	<p>Translation Mode (ATA disks only)</p> <p>Lets you select the translation mode to be used for the device. This enables the BIOS to access disks partitioned and formatted on other systems and may be necessary for users of older versions of UNIX (e.g., SCO UNIX version 3.2). Options are Automatic, Bit-Shift, LBA Assisted, User, and None.</p> <p> CAUTION: Ordinarily, the translation mode selected automatically by the BIOS should not be changed. If the selected translation mode is not compatible with the translation mode that was active when the disk was partitioned and formatted, the data on the disk will be inaccessible.</p> <p>Default Values IDE/SATA</p> <p>Allows you to specify the default values for the Multisector Transfers, Transfer Mode, and Translation Mode for ATA devices.</p> <p>Translation Parameters (ATA disks only)</p> <p> This feature appears only when User translation mode is selected.</p> <p>Allows you to specify the parameters (logical cylinders, heads, and sectors per track) used by the BIOS to translate disk I/O requests (from the operating system or an application) into terms the hard drive can accept. Logical cylinders may not exceed 1024. The number of heads may not exceed 256. The number of sectors per track may not exceed 63. These fields are only visible and changeable when the drive translation mode is set to User.</p>
<p> Support for specific Computer Setup options may vary depending on the hardware configuration.</p>		

Computer Setup *(Continued)*

Heading	Option	Description
Storage <i>(continued)</i>	Storage Options	Removable Media Boot Enables/disables ability to boot the system from removable media.
		Legacy Diskette Write Enables/disables ability to write data to legacy diskettes.  After saving changes to Removable Media Write, the computer will restart. Turn the computer off, then on, manually.
		BIOS DMA Data Transfers Allows you to control how BIOS disk I/O requests are serviced. When "Enable" is selected, the BIOS will service ATA disk read and write requests with DMA data transfers. When "Disable" is selected, the BIOS will service ATA disk read and write requests with PIO data transfers.

Support for specific Computer Setup options may vary depending on the hardware configuration.

Computer Setup (Continued)

Heading	Option	Description
Storage (continued)	Storage Options (continued)	<p>SATA Emulation</p> <p>Allows you to choose how the SATA controller and devices are accessed by the operating system.</p> <p>“<u>Separate IDE Controller</u>” is the default option. Up to 4 SATA and 2 PATA devices may be accessed in this mode. The SATA and PATA controllers appear as two separate IDE controllers. Use this option with Microsoft Windows 2000 and Windows XP.</p> <ul style="list-style-type: none"> • SATA 0 is seen as SATA Primary Device 0 • SATA 1 (if present) is seen as SATA Secondary Device 0 • SATA 2 (if present) is seen as SATA Primary Device 1 • SATA 3 (if present) is seen as SATA Secondary Device 1 <p>“<u>Combined IDE Controller</u>” is the other option. Up to 2 PATA and 2 SATA devices may be accessed in this mode. The SATA and PATA controllers appear as one combined IDE controller. Use this option with Microsoft Windows 98 and earlier operating systems.</p> <ul style="list-style-type: none"> • PATA Primary Device 0 replaces SATA 1 • PATA Primary Device 1 replaces SATA 3 <p>IDE Controller</p> <p>Allows you to enable or disable the primary IDE controller. This feature is supported on some models only.</p>

Support for specific Computer Setup options may vary depending on the hardware configuration.

Computer Setup *(Continued)*

Heading	Option	Description
Storage <i>(continued)</i>	Storage Options <i>(continued)</i>	Primary SATA Controller Allows you to enable or disable the Primary SATA controller.
		Secondary SATA Controller Allows you to enable or disable the Secondary SATA controller. This feature is supported on some models only.
	DPS Self-Test	Allows you to execute self-tests on ATA hard drives capable of performing the Drive Protection System (DPS) self-tests.  This selection will only appear when at least one drive capable of performing the DPS self-tests is attached to the system.
 Support for specific Computer Setup options may vary depending on the hardware configuration.		

Computer Setup (Continued)

Heading	Option	Description
Storage (continued)	Boot Order	<p>Allows you to:</p> <ul style="list-style-type: none"> Specify the order in which attached devices (such as a USB flash media device, diskette drive, hard drive, optical drive, or network interface card) are checked for a bootable operating system image. Each device on the list may be individually excluded from or included for consideration as a bootable operating system source. Specify the order of attached hard drives. The first hard drive in the order will have priority in the boot sequence and will be recognized as drive C (if any devices are attached). <p> MS-DOS drive lettering assignments may not apply after a non-MS-DOS operating system has started.</p> <p>Shortcut to Temporarily Override Boot Order</p> <p>To boot one time from a device other than the default device specified in Boot Order, restart the computer and press F9 when the monitor light turns green. After POST is completed, a list of bootable devices is displayed. Use the arrow keys to select the preferred bootable device and press Enter. The computer then boots from the selected non-default device for this one time.</p>
<p> Support for specific Computer Setup options may vary depending on the hardware configuration.</p>		

Computer Setup (Continued)

Heading	Option	Description
Security	Smart Card Options	Allows you to enable/disable the Smart Card to be used in place of the Power-On Password.
	Setup Password	<p>Allows you to set and enable setup (administrator) password.</p> <p> If the setup password is set, it is required to change Computer Setup options, flash the ROM, and make changes to certain plug and play settings under Windows.</p> <p>See the <i>Troubleshooting Guide</i> on the <i>Documentation and Diagnostics</i> CD for more information.</p>
	Power-On Password	<p>Allows you to set and enable power-on password.</p> <p>See the <i>Troubleshooting Guide</i> on the <i>Documentation and Diagnostics</i> CD for more information.</p>
	Password Options (This selection appears only if a power-on password or setup password is set.)	<p>Allows you to:</p> <ul style="list-style-type: none"> • Lock legacy resources (appears if a setup password is set) • Enable/disable network server mode (appears if a power-on password is set) • Specify whether the password is required for warm boot (CTRL+ALT+DEL) (appears if a power-on password is set) <p>See the <i>Desktop Management Guide</i> on the <i>Documentation and Diagnostics</i> CD for more information.</p>
 Support for specific Computer Setup options may vary depending on the hardware configuration.		

Computer Setup (Continued)

Heading	Option	Description
Security (continued)	Smart Cover	<p>Allows you to:</p> <ul style="list-style-type: none"> • Lock/unlock the Cover Lock. • Set the Cover Removal Sensor to Disable/Notify User/Setup Password. <p> <i>Notify User</i> alerts the user that the sensor has detected that the cover has been removed. <i>Setup Password</i> requires that the setup password be entered to boot the computer if the sensor detects that the cover has been removed.</p> <p>This feature is supported on some models only. See the <i>Desktop Management Guide</i> on the <i>Documentation and Diagnostics</i> CD for more information.</p>
	Embedded Security	<p>Allows you to:</p> <ul style="list-style-type: none"> • Enable/disable the Embedded Security device • Reset the device to Factory Settings • Enable/disable power-on authentication support. (some models) • Reset authentication credential. (some models) <p>This feature is supported on some models only. See the <i>Desktop Management Guide</i> on the <i>Documentation and Diagnostics</i> CD for more information.</p>
<p> Support for specific Computer Setup options may vary depending on the hardware configuration.</p>		

Computer Setup *(Continued)*

Heading	Option	Description
Security <i>(continued)</i>	Device Security	Device Available/Device Hidden <ul style="list-style-type: none">• Serial ports• Parallel port• Front USB ports• System audio• Internal speaker (some models) (does not affect external speakers)• Network controllers (some models)• MultiBay devices (some models)• SMBus controller (some models)• SCSI controllers (some models)• Embedded security device (some models)
	Network Service Boot	Enables/disables the computer's ability to boot from an operating system installed on a network server. (Feature available on NIC models only; the network controller must reside on the PCI bus or be embedded on the system board.)

Support for specific Computer Setup options may vary depending on the hardware configuration.

Computer Setup (Continued)

Heading	Option	Description
Security (continued)	System IDs	<p>Allows you to set:</p> <ul style="list-style-type: none"> Asset tag (18-byte identifier) and ownership Tag (80-byte identifier displayed during POST). <p>See the <i>Desktop Management Guide</i> on the <i>Documentation and Diagnostics</i> CD for more information.</p> <ul style="list-style-type: none"> Chassis serial number or Universal Unique Identifier (UUID) number. The UUID can only be updated if the current chassis serial number is invalid. (These ID numbers are normally set in the factory and are used to uniquely identify the system.) Keyboard locale setting (for example, English or German) for System ID entry.
	DriveLock Security (some models)	<p>Allows you to assign or modify a master or user password for hard drives. When this feature is enabled, the user is prompted to provide one of the DriveLock passwords during POST. If neither is successfully entered, the hard drive will remain inaccessible until one of the passwords is successfully provided during a subsequent cold-boot sequence.</p> <p> This selection will only appear when at least one drive that supports the DriveLock feature is attached to the system.</p> <p>See the <i>Desktop Management Guide</i> on the <i>Documentation and Diagnostics</i> CD for more information.</p>
<p> Support for specific Computer Setup options may vary depending on the hardware configuration.</p>		

Computer Setup *(Continued)*

Heading	Option	Description
Security <i>(continued)</i>	OS Security (some models)	<ul style="list-style-type: none">• Data Execution Prevention (some models) (enable/disable) Helps prevent OS security breaches.  This selection is in effect only if the processor and operating system being used comprehend and utilize this feature. <ul style="list-style-type: none">• Intel Virtualization Technology (some models) (enable/disable) Changing this setting requires turning the computer off and then back on.  This selection is in effect only if the processor and operating system being used comprehend and utilize this feature.
	Data Execution Prevention (some models)	Enable/Disable Data Execution Prevention Mode helps prevent OS security breaches.  This selection is in effect only if the processor and operating system being used comprehend and utilize Data Execution Prevention Mode.
	 Support for specific Computer Setup options may vary depending on the hardware configuration.	

Computer Setup (Continued)

Heading	Option	Description
Security (continued)	Master Boot Record Security (some models)	<p>Allows you to enable or disable Master Boot Record (MBR) Security.</p> <p>When enabled, the BIOS rejects all requests to write to the MBR on the current bootable disk. Each time the computer is powered on or rebooted, the BIOS compares the MBR of the current bootable disk to the previously-saved MBR. If changes are detected, you are given the option of saving the MBR of the current bootable disk, restoring the previously-saved MBR, or disabling MBR Security. You must know the setup password, if one is set.</p> <p> Disable MBR Security before intentionally changing the formatting or partitioning of the current bootable disk. Several disk utilities (such as FDISK and FORMAT) attempt to update the MBR.</p> <p>If MBR Security is enabled and disk accesses are being serviced by the BIOS, write requests to the MBR are rejected, causing the utilities to report errors.</p> <p>If MBR Security is enabled and disk accesses are being serviced by the operating system, any MBR change will be detected by the BIOS during the next reboot, and an MBR Security warning message will be displayed.</p>
	Save Master Boot Record (some models)	<p>Saves a backup copy of the Master Boot Record of the current bootable disk.</p> <p> Only appears if MBR Security is enabled.</p>
<p> Support for specific Computer Setup options may vary depending on the hardware configuration.</p>		

Computer Setup *(Continued)*

Heading	Option	Description
Security (continued)	Restore Master Boot Record (some models)	<p>Restores the backup Master Boot Record to the current bootable disk.</p> <p> Only appears if all of the following conditions are true:</p> <ul style="list-style-type: none">• MBR Security is enabled.• A backup copy of the MBR has been previously saved.• The current bootable disk is the same disk from which the backup copy of the MBR was saved. <p> CAUTION: Restoring a previously saved MBR after a disk utility or the operating system has modified the MBR may cause the data on the disk to become inaccessible. Only restore a previously saved MBR if you are confident that the current bootable disk's MBR has been corrupted or infected with a virus.</p>
<p> Support for specific Computer Setup options may vary depending on the hardware configuration.</p>		

Computer Setup (Continued)

Heading	Option	Description
Power	OS Power Management	<ul style="list-style-type: none"> • Runtime Power Management—Enable/Disable. Allows certain operating systems to reduce processor voltage and frequency when the current software load does not require the full capabilities of the processor. • Idle Power Savings—Extended/Normal. Allows certain operating systems to decrease the processors power consumption when the processor is idle. • ACPI S3 Support—Enables or disables ACPI S3 support. • ACPI S3 Hard Disk Reset—Enabling this causes the BIOS to ensure hard disks are ready to accept commands after resuming from S3 before returning control to the operating system. • ACPI S3 PS2 Mouse Wakeup—Enables or disables waking from S3 due to PS2 mouse activity. • USB Wake on Device Insertion (some models)—Allows system to wake from Standby on USB device insertion.
	Hardware Power Management	SATA power management enables or disables SATA bus and/or device power management.
	Thermal	<ul style="list-style-type: none"> • Fan idle mode—This bar graph controls the minimum permitted fan speed.  This setting only changes the minimum fan speed. The fans are still automatically controlled.
 Support for specific Computer Setup options may vary depending on the hardware configuration.		

Computer Setup *(Continued)*

Heading	Option	Description
Advanced* *For advanced users only.	Power-On Options	<p>Allows you to set:</p> <ul style="list-style-type: none">• POST mode (QuickBoot, FullBoot, or FullBoot every 1–30 days).• POST messages (enable/disable).• F9 prompt (enable/disable or hidden/displayed). Enabling this feature will display the text “F9 = Boot Menu” during POST. Disabling this feature prevents the text from being displayed. However, pressing F9 will still access the Shortcut Boot [Order] Menu screen. See Storage > Boot Order for more information.• F10 prompt (enable/disable or hidden/displayed). Enabling this feature will display the text “F10 = Setup” during POST. Disabling this feature prevents the text from being displayed. However, pressing F10 will still access the Setup screen.• F12 prompt (enable/disable or hidden/displayed). Enabling this feature will display the text “F12 = Network Service Boot” during POST. Disabling this feature prevents the text from being displayed. However, pressing F12 will still force the system to attempt booting from the network.

 Support for specific Computer Setup options may vary depending on the hardware configuration.

Computer Setup (Continued)

Heading	Option	Description
Advanced* (continued) *For advanced users only.	Power-On Options (continued)	<p>Allows you to set:</p> <ul style="list-style-type: none"> Option ROM prompt (enable/disable) Enabling this feature will cause the system to display a message before loading option ROMs. (This feature is supported on some models only.) Remote wakeup boot source (remote server/local hard drive). After Power Loss (off/on/previous state): Setting this option to "on:" <ul style="list-style-type: none"> Off—causes the computer to remain powered off when power is restored. On—causes the computer to power on automatically as soon as power is restored. On—allows you to power on the computer using a power strip switch, if the computer is connected to an electric power strip. Previous state—causes the computer to power on automatically as soon as power is restored, if it was on when power was lost. <p> If you turn off power to the computer using the switch on a power strip, you will not be able to use the suspend/sleep feature or the Remote Management features.</p> <ul style="list-style-type: none"> POST Delay (None, 5, 10 15, or 20 seconds). Enabling this feature will add a user-specified delay to the POST process. This delay is sometimes needed for hard disks on some PCI cards that spin up very slowly; so slowly that they are not ready to boot by the time POST is finished. The POST delay also gives you more time to select F10 to enter Computer (F10) Setup.
<p> Support for specific Computer Setup options may vary depending on the hardware configuration.</p>		

Computer Setup (Continued)

Heading	Option	Description
Advanced* (continued) *For advanced users only.	Power-On Options (continued)	<p>Allows you to set:</p> <ul style="list-style-type: none"> I/O APIC Mode (enable/disable). Enabling this feature will allow Microsoft Windows Operating Systems to run optimally. This feature must be disabled for certain non-Microsoft Operating Systems to work properly. Hyper-threading (enable/disable). Set Up Browse Mode (enable/disable) (some models). Enabling this feature permits Computer Setup to be viewed, but not changed, without entering the setup password. Limit CPUID Maximum Value to 3. Restricts the number of CPUID functions reported by the microprocessor. Enable this feature if booting to WinNT. ACPI/USB Buffers @ Top of Memory (enable/disable). Enabling this feature places USB memory buffers at the top of memory. The advantage is that some amount of memory below 1 MB is freed up for use by option ROMs. The disadvantage is that a popular memory manager, HIMEM.SYS, does not work properly when USB buffers are at top of memory AND the system has 64 MB or less of RAM.
	Execute Memory Test (some models)	Restarts the computer and executes the POST memory test.
	BIOS Power-On	Allows you to set the computer to turn on automatically at a time you specify.
 Support for specific Computer Setup options may vary depending on the hardware configuration.		

Computer Setup (Continued)

Heading	Option	Description
Advanced* <i>(continued)</i> *For advanced users only.	Onboard Devices	Allows you to set resources for or disable onboard system devices (diskette controller, serial port, or parallel port).
	PCI Devices	<ul style="list-style-type: none"> • Lists currently installed PCI devices and their IRQ settings. • Allows you to reconfigure IRQ settings for these devices or to disable them entirely. These settings have no effect under an APIC-based operating system.
	PCI VGA Configuration	Displayed only if there are multiple PCI video adapters in the system. Allows you to specify which VGA controller will be the “boot” or primary VGA controller.  In order to see this entry, you must enable Integrated Video (Advanced > Device Options) and Save Changes and Exit.
	Bus Options	On some models, allows you to enable or disable: <ul style="list-style-type: none"> • PCI SERR# Generation. • PCI VGA palette snooping, which sets the VGA palette snooping bit in PCI configuration space; only needed when more than one graphics controller is installed.
 Support for specific Computer Setup options may vary depending on the hardware configuration.		

Computer Setup (Continued)

Heading	Option	Description
Advanced* (continued) *For advanced users only.	Device Options	<p>Allows you to set:</p> <ul style="list-style-type: none"> • Printer mode (Bi-Directional, EPP + ECP, Output Only). • Num Lock state at power-on (off/on). • S5 Wake on LAN (enable/disable). <ul style="list-style-type: none"> • To disable Wake on LAN during the off state (S5), use the arrow (left and right) keys to select the Advanced > Device Options menu and set the S5 Wake on Lan feature to "Disable." This obtains the lowest power consumption available on the computer during S5. It does not affect the ability of the computer to Wake on LAN from suspend or hibernation, but will prevent it from waking from S5 via the network. It does not affect operation of the network connection while the computer is on. • If a network connection is not required, completely disable the network controller (NIC) by using the arrow (left and right) keys to select the Security > Device Security menu. Set the Network Controller option to "Device Hidden." This prevents the network controller from being used by the operating system and reduces the power used by the computer in S5. • Processor cache (enable/disable).

Support for specific Computer Setup options may vary depending on the hardware configuration.

Computer Setup (Continued)

Heading	Option	Description
Advanced* (continued) *For advanced users only.	Device Options (continued)	<p>Allows you to set:</p> <ul style="list-style-type: none"> Unique Sleep State Blink Patterns. Allows you to choose an LED blink pattern that uniquely identifies each sleep state. <ul style="list-style-type: none"> 1 blink followed by 2-sec. pause = S1 2 blinks followed by 2-sec. pause = S2 3 blinks followed by 2-sec. pause = S3 Integrated Video (enable/disable) Allows you to use integrated video and PCI Up Solution video at the same time (available on some models only). <p> After Integrated Video is enabled and changes saved, a new menu item appears under Advanced to allow you to select the primary VGA controller video device.</p> <p> Inserting a PCI or PCI Express video card automatically disables Integrated Video. When PCI Express video is on, Integrated Video must remain disabled.</p> <ul style="list-style-type: none"> Monitor Tracking (enable/disable). Allows BIOS to save monitor asset information.
<p> Support for specific Computer Setup options may vary depending on the hardware configuration.</p>		

Computer Setup *(Continued)*

Heading	Option	Description
Advanced* <i>(continued)</i> *For advanced users only.	Device Options <i>(continued)</i>	Allows you to set: <i>(continued)</i> <ul style="list-style-type: none">• NIC PXE Option ROM Download (enable/disable). The BIOS contains an embedded NIC option ROM to allow the unit to boot through the network to a PXE server. This is typically used to download a corporate image to a hard drive. The NIC option ROM takes up memory space below 1MB commonly referred to as DOS Compatibility Hole (DCH) space. This space is limited. This F10 option will allow users to disable the downloading of this embedded NIC option ROM thus giving more DCH space for additional PCI cards which may need option ROM space. The default will be to have the NIC option-ROM-enabled.
 Support for specific Computer Setup options may vary depending on the hardware configuration.		

Recovering the Configuration Settings

This method of recovery requires that you first perform the Save to Removable Media command with the Computer Setup (F10) Utility before Restore is needed. (See [“Save to Removable Media” on page 4](#) in the Computer Setup options table.)

It is recommended that you save any modified computer configuration settings to a diskette, a USB flash media device, or a diskette-like device (a storage device set to emulate a diskette drive) and save the diskette or device for possible future use.

To restore the configuration, insert the diskette, USB flash media device, or other storage media emulating a diskette with the saved configuration and perform the Restore from Removable Media command with the Computer Setup (F10) Utility. (See [“Restore from Removable Media” on page 4](#) in the Computer Setup options table.)
